

Here is the professional Digital Marketing Performance Report in English, written in a clear, executive style suitable for your GitHub portfolio or management presentation.

Digital Marketing Paid Ads Performance Report

1. Core Performance & Baseline Metrics (Overall KPIs)

- **Return on Ad Spend (ROAS):** Standing at a strong **4.01**. This means for every dollar invested across all channels, the business generates roughly \$4 in revenue, indicating a highly profitable baseline.
- **Click-Through Rate (CTR):** A healthy **4.23%**, proving that the ad creatives, messaging, and audience targeting are compelling and highly engaging.
- **Conversion Rate (CR):** At **1.17%**. While this is acceptable for e-commerce, it leaves room for optimization given how high the initial click-through interest (CTR) is.

Channel Breakdown (Revenue vs. Spend):

- **Google Ads:** The undisputed champion, bringing in **584.23K** in revenue on a minimal ad spend of just **30.12K**.
- **Instagram:** The second best performer, generating **237.76K** in revenue with an ad spend of **46.8K**.
- **Facebook:** Generated **162.64K** in revenue but demanded the highest budget allocation at **113.2K**.
- **TikTok:** The lowest performer commercially, yielding only **24.8K** in revenue.

2. Key Insights & Critical Red Flags

- **The Facebook Budget Bleed (ROAS = 1):** Facebook is swallowing the largest portion of the budget (~113.2K) while delivering a **ROAS of exactly 1.00**. This means the platform is barely breaking even on direct ad spend, draining financial resources without contributing to net profit.
- **The TikTok Paradox (High Awareness, Zero Sales):** TikTok smashed performance in top-of-funnel metrics, scoring the highest visibility across the board with **1.8M Impressions** and **1.4M Reach**. However, its **ROAS is 0.00**. It is highly effective for brand exposure but fails entirely at driving direct conversions.
- **Inverted Budget Allocation:** The account is currently suffering from poor budget distribution. Our most profitable channel (Google Ads) receives the lowest funding, while our least efficient channels (Facebook & TikTok) absorb the most spend.

3. Strategic Forecasts & Recommendations

- **Aggressive Budget Reallocation:**
 - *Recommendation:* Immediately shift 40% to 50% of the budget away from Facebook and TikTok and inject it directly into **Google Ads**. Google boasts an extraordinary **ROAS of 19.00**. Scaling this budget will maximize top-line revenue rapidly.
- **Pivot TikTok's Campaign Objective:**
 - *Forecast:* Expecting TikTok to drive immediate e-commerce purchases with the current setup is unrealistic.
 - *Recommendation:* Stop conversion-focused campaigns on TikTok. Instead, treat it strictly as a Brand Awareness tool or completely change the product presentation style to appeal better to Gen-Z shopping behavior.
- **Conversion Rate Optimization (CRO) on the Website:**
 - *Insight:* The gap between a high CTR (4.23%) and a modest CR (1.17%) means users love the ads and click on them, but drop off once they reach the website.
 - *Recommendation:* Audit the landing page and checkout user experience (UX). Review page load speeds, mobile responsiveness, payment options, and shipping barriers to fix the checkout drop-offs.

Executive Summary for Management:

"Our digital marketing engine is highly efficient, yielding an overall **4.01 ROAS**, driven by outstanding creative engagement (**4.23% CTR**). However, profitability is capped due to skewed budget distribution. **Google Ads** is our primary growth driver with an unmatched **19.00 ROAS**, while **Facebook** is breaking even (**1.00 ROAS**), and **TikTok** functions purely as an awareness vehicle (**0.00 ROAS** despite 1.8M impressions). HR and Marketing recommend scaling back Facebook spend, doubling down on Google Ads, and initiating a website CRO audit to maximize our conversion rates in the upcoming quarter."
